1. Applicant is given **no new time period** if the non-compliant amendment is an after-final amendment or an amendment filed after allowance. If applicant wishes to resubmit the non-compliant after-final amendment with corrections, the **entire corrected amendment** must be resubmitted.
2. Applicant is given **one month**, or thirty (30) days, whichever is longer, from the mail date of this notice to supply the correction, if the non-compliant amendment is one of the following: a preliminary amendment, a non-final amendment (including a submission for a request for continued examination (RCE) under 37 CFR 1.114), a supplemental amendment filed within a suspension period under 37 CFR 1.103(a) or (c), and an amendment filed in response to a *Quayle* action. 1. The reply filed on August 6, 2007 is not fully responsive to the prior Office Action because of the following omission(s) or matter(s): Applicant did not include: (a) an identification of the species that is elected consonant with the requirement on page 5 of the restriction on June 5, 2007; and (b) a listing of all claims readable thereon, including any claims subsequently added. See 37 CFR 1.111.

Applicant contended that:

FIG. 1 shows a camshaft assembly with eight cams illustrated in FIGS. 2-4 and 6a. As the elected group was claims 1-11 regarding a camshaft, and FIGS. 2-6 illustrate embodiments of an apparatus for making lateral indentations, there are no different species to be identified.

The Examiner respectfully submits that the above contention is unsupported by Applicant's specification. In fact, Applicant's Brief Description of the Drawings describes:

FIG. 1 shows an inventive camshaft according to one embodiment:

- A) in a longitudinal section;
- B) in an axial view; and
- C) in a cross-sectional view.

FIG. 2 shows an inventive device with a clamped-in camshaft in a first embodiment.

FIG. 3 shows an inventive device with *a clamped-in camshaft in a second embodiment:*

- A) in a longitudinal section; and
- B) in a cross-section through the forming punch and an upper supporting bearing.

FIG. 4 shows an inventive device with *a clamped-in camshaft in a third embodiment.*

FIG. 5 shows a segment of an inventive device in a further embodiment:

- A) in a longitudinal section through the forming punch;
- B) in a cross-section through an electrode;
- C) in a cross-section through a lower supporting bearing;
- and
- D) in a plan view.

FIG. 6 shows an inventive device with *a clamped-in camshaft in a fourth embodiment:*

Art Unit: 3682

- A) in a longitudinal section; and
- B) in a cross-section through an electrode.

As described above, FIGS. 2-6 illustrate embodiments of different camshafts, not embodiments of an apparatus for making lateral indentations. The patentably distinct camshafts are best seen by comparison of FIGS. 1A, 2A, 3A, and 4A, etc. See also paragraphs [0041] *et seq.* of the specification.

Since the above-mentioned reply appears to be *bona fide*, applicant is given **ONE (1) MONTH or THIRTY (30) DAYS** from the mailing date of this notice, whichever is longer, within which to supply the omission or correction in order to avoid abandonment. **EXTENSIONS OF THIS TIME PERIOD MAY BE GRANTED UNDER 37 CFR 1.136(a).**
